

RxLogic and Surescripts: Smarter Prescribing Through Real-Time Integration

RxLogic is a leading technology company for pharmacy benefit claims processing that provides a SaaS-based platform of smart adjudication solutions.

By combining smart adjudication with real-time prescribing intelligence, RxLogic enhances how providers access and use critical patient and benefit data. With the integration of Surescripts, prescribers gain instant visibility into coverage, cost and medication history, empowering safer, faster and more informed prescribing decisions.

Delivering Value Through Real-Time Prescribing Intelligence

Timely, accurate prescribing requires more than clinical knowledge, it demands instant access to patient-specific coverage details, costs and medication history. RxLogic's integration with Surescripts will bring this critical data directly into the prescriber's workflow, enabling more informed decisions at the point of care.

By embedding Surescripts Formulary and Benefit (F&B), Real-Time Prescription Benefit (RTPB) and Medication History services into its platform, it enables RxLogic to deliver a seamless experience for providers and pharmacy benefit stakeholders.

Prescribers will be able to view real-time coverage information, assess patient-specific out-of-pocket costs and evaluate therapeutic alternatives, all before the prescription is written. They also gain access to a patient's complete medication history, aggregated from multiple sources, supporting safer and more coordinated care. Together, these capabilities help reduce prescription abandonment, prevent delays at the pharmacy, improve affordability and elevate the overall member experience.

Where Traditional Prescribing Data Falls Short

In many traditional prescribing workflows, providers lack access to real-time benefit details or a patient's complete medication history. Without this information, prescriptions are often written for drugs that aren't covered or are unnecessarily expensive, leading to delays at the pharmacy, frustrated patients and costly rework for providers.

These gaps can also mean missed opportunities to recommend more affordable alternatives or worse, overlooking important aspects of a patient's medication history that could affect clinical safety. RxLogic will solve these challenges by embedding Surescripts services directly into the pharmacy benefit workflow. This fully integrated approach ensures that prescribers have instant, accurate access to the information they need, without toggling between systems or relying on outdated tools, enabling safer, faster and more cost-effective care.

What Sets RxLogic Apart

Formulary & Benefit Integration (F&B): Provides real-time coverage data and formulary alignment, ensuring prescribers select medications that match plan benefits and tiers.

Real-Time Prescription Benefit Check (RTPB): Delivers patient-specific cost estimates and lower-cost alternatives during prescribing, helping improve affordability and adherence.

Medication History Access: Aggregates and displays a patient's prescription history across multiple sources to enhance provider decision-making and support safety.

Fully Embedded Into RxLogic Platform: No add-ons, no external portals. Surescripts services are integrated into RxLogic's adjudication, benefit design and eligibility architecture, ensuring accurate, rules-based delivery.

Built on Modern, Interoperable Infrastructure: RxLogic's cloud-native, API-first platform enables seamless connectivity with EMRs, TPAs, PBMs and third-party vendors. High performance, secure and built for scale.

Future-Ready Clinical Data Integration

RxLogic is committed to expanding access to prescriber intelligence and optimizing the intersection between benefit management and clinical decision-making. Our roadmap includes:

- **Enhanced alerting for step therapy and prior authorization rules.**
- **Deeper analytics on prescribing behavior and adherence trends.**
- **Expanded partnerships with data providers and EHR platforms.**

Together, these initiatives create a connected, intelligent ecosystem that improves outcomes for patients, providers and plan sponsors alike.

Smarter Prescriptions. Safer Outcomes. Better Experiences.

With real-time Surescripts integration, RxLogic helps healthcare stakeholders deliver better prescription decisions, reduce friction at the point of sale and support safer, more cost-effective care.

As the backbone of pharmacy claims processing, RxLogic empowers its stakeholder clients across the pharmacy benefit ecosystem to drive efficiency in pharmacy benefit and rebate administration, including:

- **PBMs**
- **Health plans and TPAs**
- **Self-insured employers**
- **Hospice and LTC organizations**
- **Government organizations**
- **Commercial, workers' comp and medical plans**
- **Pet and veterinary benefit programs**

A privately held, agile organization, RxLogic provides adaptable, data-driven solutions that enhance operational performance, improve patient outcomes and reduce costs. With a SaaS-based, user-focused interface and an API-first architecture, RxLogic equips healthcare and pharmacy benefit stakeholders with agnostic tools to deliver powerful services at scale.
