

RxLogic Neutral and Independent Technology Designed for Captives: Transparent, Flexible Pharmacy Benefit Infrastructure for Better Cost Control and Member Outcomes

Key Takeaways:

- The RxLogic modern pharmacy claim adjudication technology platform helps healthcare captives manage risk by shifting them from reactive claims-payers to proactive risk managers.
- Configurable infrastructure supports rebate management, benefit design, claims oversight and member utilization reporting across captive programs – tracking component-level data to spot emerging high-cost drug drivers early.
- Claim-level visibility and reporting provide clearer insight into pharmacy spend, rebates, utilization trends and program performance, indicating specialty medication utilization trends before they trigger massive stop-loss claims.
- Transparent, traceable workflows help captives and their partners respond to changing expectations across the pharmacy benefit environment.

The Background

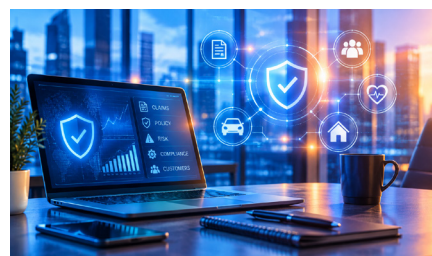

Captive insurance programs are built to give employers greater ownership of healthcare risk, but achieving that goal requires real technology behind it, not just a funding structure.

RxLogic provides the technology infrastructure, data and reporting capabilities captives need to manage pharmacy spend with greater control and precision.

What Captive Programs Gain With RxLogic

- Configurable technology program logic for benefit design, pricing rules, claims routing and captive-specific requirements.
- Real-time claims adjudication and connectivity across pharmacy networks, PBMs, TPAs and other program partners.
- Administration support for rebate management, formulary strategy and benefit customization across participating employers.
- Claim-level reporting across pharmacy spend, utilization, rebates and overall program performance.
- Rebate-related workflow automation and financial traceability that provide greater visibility into program outcomes.
- Audit-ready records showing how benefit rules, pricing decisions and eligibility requirements were applied.
- API-first integration that supports existing partner relationships and allows programs to evolve without rebuilding underlying infrastructure.

How RxLogic Is Different

Captives may set sound benefit strategies, but performance ultimately depends on how those strategies are executed across claims, pharmacy networks and program partners. Fragmented systems, delayed reporting and limited claim-level data can make it difficult to verify pricing accuracy, identify utilization trends or confirm that rebate value reaches the captive.

RxLogic brings these functions into a connected, transparent operational environment. As an independently operated technology platform, RxLogic is not a PBM and does not retain rebates, or steer claims.

Captives maintain control over program design, data and partner relationships while gaining the infrastructure needed to evaluate performance, address execution gaps and adapt programs as the pharmacy benefit market changes.
